

- Do not make applications during the rain.
- Do not wet plants to the point of runoff.
- Not for use in outdoor residential misting systems (indoor or outdoor).
- Do not allow adults, children, or pets to enter the treated area until sprays have dried.
- To avoid possible harm to honey bees, it is advisable to apply in the early morning or late evening hours.
- Not for indoor use.

Pyrethrins degrade rapidly in sunlight. To ensure the best performance, coverage is key. Use spray equipment that will provide the best coverage and direct contact with as many insects as possible.

Dilute 1 to 1.4 fl. oz. of Bug Buster-O per gallon of water per 1,000 sq. ft. Do not exceed the maximum application rates of 1.4 fl. oz. per 1,000 sq. ft. Apply dilute solution with all types of agricultural sprayers, including compressed air sprayers or pump driven sprayers. Mix only enough for immediate use. Spraying should begin when the insects first appear. Do not wait until the plants are heavily infested.

IMPORTANT NOTE: Plant safety is an important consideration when using insecticides. However, it is not possible to evaluate the phytotoxicity of Bug Buster-O on numerous plant varieties that may react differently to insecticides in different growth stages or under varying environmental conditions. Before making widespread applications of Bug Buster-O, treat a limited number of plants and observe for phytotoxicity over a 10 day period.
